

# Rudra Patel

(224) 607-9378 | [rudrap26176@gmail.com](mailto:rudrap26176@gmail.com) | [linkedin.com/in/rudrapatel09](https://linkedin.com/in/rudrapatel09) | [rudrapatel-website.azurewebsites.net](http://rudrapatel-website.azurewebsites.net) | [github.com/rpat9](https://github.com/rpat9)

## Education

<b>Lewis University, Romeoville, IL</b> <i>Bachelor of Science in Computer Science, Concentration in Artificial Intelligence</i>	<b>Expected: May 2026</b> <i>GPA: 3.87 / 4.0</i>
<ul style="list-style-type: none"><li>• <b>Relevant Coursework:</b> Data Structures and Algorithms, Machine Learning, Software Engineering, Artificial Intelligence</li></ul>	

## Experience

<b>Hometown Liquor</b>   <i>React, TypeScript, Python, FastAPI, PostgreSQL, Tailwind, Docker</i>	<b>May 2025 - Jul 2025</b>
<i>Software Engineer (Contract)</i>	<i>Braceville, IL</i>

- Increased monthly revenue **45%** to **\$40,000** by building a full-stack e-commerce platform for **750+** products with mobile-first design, PostgreSQL full-text search achieving sub-200ms response times, and checkout flow supporting guest and authenticated purchases
- Built **89** REST API endpoints across **15** route modules using FastAPI and async PostgreSQL, implementing JWT authentication with tokens, role-based access control, and error handling achieving **99.9%** uptime on critical operations
- Automated POS integration synchronizing inventory across distributed store network with API client handling pagination for **100+** items per batch, SKU matching with conflict resolution, eliminating manual inventory updates
- Built an admin dashboard with real-time analytics (revenue trends, order patterns, top products), bulk email system with customer segmentation, and CRUD operations for 5 modules reducing administrative overhead by **60%**

<b>QuizMaster</b>   <i>React, JavaScript, Node.js, Tailwind, Google Cloud Platform, Github Actions, Firebase</i>	<b>Aug 2025 - Dec 2025</b>
<i>Lead Developer (Capstone)</i>	<i>Romeoville, IL</i>

- Eliminated N+1 query pattern through network waterfall analysis, reducing dashboard load time from **30+** seconds to sub-5 seconds by implementing batch Firebase queries with a caching layer, consolidating **6** API calls to 1 endpoint
- Reduced production bundle **89% (16.1MB to 1.7MB)** and cut cloud hosting costs **37%** by converting 15MB of PNG assets to WebP, removing **9** unused Firebase Functions, and eliminating 26 redundant npm packages
- Migrated **17** Firebase Functions from deprecated Node.js 16 to Node.js 20 ahead of the October 2025 deadline, implementing error handling and async patterns across **1,474** lines of cloud function code
- Refactored component architecture to eliminate **80%** of redundant database reads by extracting business logic into service layer, implementing React Context API for state management, and consolidating duplicate component renders

## Projects

<b>ExoViz</b>   <i>React, TypeScript, Spring Boot, FastAPI, PostgreSQL, Docker</i>	<b>Dec 2025 - Present</b>
<ul style="list-style-type: none"><li>• Building an exoplanet exploration platform processing <b>5,000+</b> NASA records with real-time 3D visualization using Three.js, enabling astronomers to filter by habitability score, stellar type, and orbital characteristics</li><li>• Architected 3-service microservices backend (Spring Boot for data aggregation, FastAPI for ML inference, Redis for caching), reducing query latency by <b>50%</b>, developed ML model predicting planet habitability with <b>82%</b> accuracy using Scikit-learn</li></ul>	

<b>Social Media Sentiment Classifier</b>   <i>Python, Scikit-learn, TF-IDF, GridSearchCV</i>	<b>Nov 2025</b>
<ul style="list-style-type: none"><li>• Built a sentiment classification system achieving <b>78%</b> accuracy on <b>241K</b> social media posts using hyperparameter-tuned Logistic Regression with TF-IDF vectorization, outperforming pretrained RoBERTa (<b>54%</b>) on noisy data through GridSearchCV with 5-fold cross-validation</li><li>• Demonstrated deep learning limitations by comparative analysis showing domain-aligned RoBERTa (<b>74%</b> on tweet_eval) vs task-tuned traditional models (<b>78%</b> on Kaggle), proving model-data alignment matters more than architectural complexity</li></ul>	

<b>MasterChef Claude</b>   <i>React, Claude API, Tailwind, Firebase, Docker, AWS</i>	<b>Apr 2025 - May 2025</b>
<ul style="list-style-type: none"><li>• Built an AI recipe generator integrating Claude API, serving personalized recipes in under <b>5</b> seconds through optimized prompt engineering and async request handling for dietary restrictions and ingredient preferences</li><li>• Simplified deployment with Docker containers and automated CI/CD pipeline on AWS, reducing deployment time by <b>80%</b></li></ul>	

## Skills

**Languages:** Python, Java, JavaScript/TypeScript, SQL, HTML/CSS

**Frameworks & Tools:** React, Node.js, Spring Boot, FastAPI, Tailwind, Docker, CI/CD, GitHub Actions

**Database & Cloud:** PostgreSQL, Redis, Firebase, MySQL, AWS, GCP, Azure

**ML/Data & Architecture:** Scikit-learn, TensorFlow, Pandas, REST APIs, System Design, Microservices
